About GenVault

GenVault is the leader in providing DNA sample accessibility for genomic discovery, medicine and identification. GenVault serves customers across medical centers, academic institutions, pharmaceutical companies, and law enforcement agencies. As a scalable and reliable alternative to traditional freezers and DNA purification systems, GenVault's dry-state platform enables the extraction, preservation, recovery and distribution of DNA at room temperature. Future systems will also accommodate proteins and RNA to provide a comprehensive solution. From its GenPlate to its Dynamic Archive solution, GenVault is continuously developing and refining best practices for DNA sample management. For more information visit us at www.genvault.com.
